

**weldotron®****SEMI AUTOMATIC CONSOLE L-SEALERS**

The Weldotron 5200 series is a group of semi automatic console L-sealers designed to provide dependable long term performance in continuous production environments. 5200 series wrappers incorporate push button pneumatic sealing and automatic package discharge. With sealing head hold-down and product take-away automatically controlled, the operator is free to load a new package while the proceeding one is being sealed.

Push button operation also reduces operator fatigue and permits untrained personnel to function efficiently.

5200 Series features include a new surface film unwind with automatic film braking to prevent film over-travel. Impulse sealing, adjustable temperature control and element heat compensator provide the adjustability required for optimum performance with all types of shrink film.

Model 5211

## 5200 SERIES FEATURES:

- Push Button Operation
- Pneumatic Sealing
- Heavy Duty Construction
- Handles All Shrink Films
- Automatic Package Discharge
- Automatic Cycle Timing
- Adjustable Heat Control
- Seal Temperature Compensator
- Stainless Steel Loading Tray
- Quick Conveyor Height Adjustment

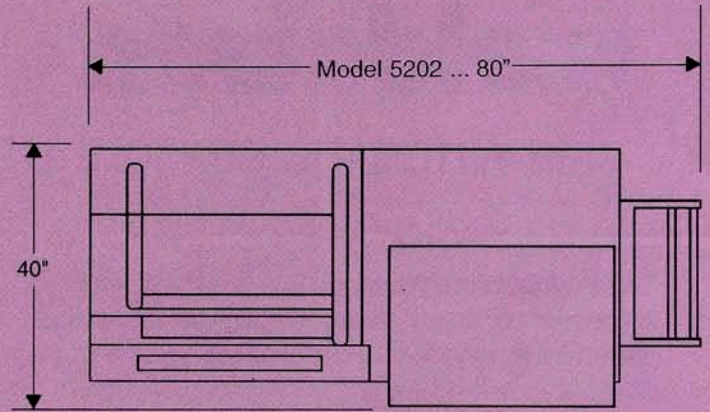

## SPECIFICATIONS:

MODEL	SEAL AREA W x L	MAX. FILM WIDTH	POWER		
			VOLTS	AMPS	PH
5202	20" x 28"	26"	230	30	1
5213	30" x 40"	36"	230	40	1

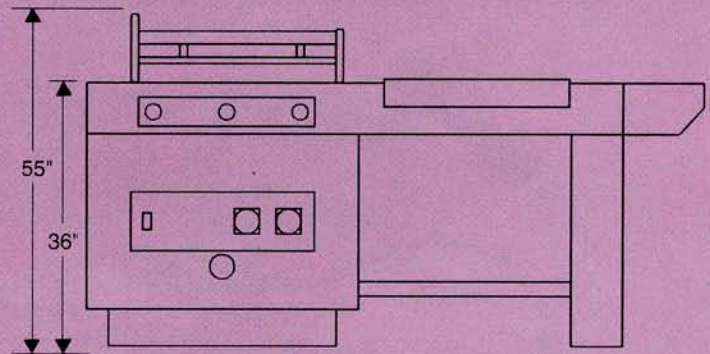

**AIR REQUIREMENT: 14 CFM, Free @ 80 PSI**  
 Specifications subject to change without notice.

## OPTIONAL ACCESSORIES

- Film Microperforator
- Double Roll Film Rack
- Cushioned-Start Conveyor To Prevent Product Shingling
- Spare Parts Kits

## A COMPLETE PACKAGE WITH EVERY STROKE!

Operator inserts product between layers of film.

After product is transferred to sealing area, operator presses palm buttons to activate sealing head.

The package is automatically sealed and carried by the conveyor into the shrink tunnel while the operator inserts next product into the film.
