

weldtron®

FILM PERFORATION SYSTEM FOR SHRINK WRAP MACHINES

The Weldotron **MICROPERFORATOR™** is a new cold pin film perforation device that offers major performance advantages over hole punches, burners and conventional pin perforators. This unique air evacuation system places hundreds of nearly invisible “micro-pores” across the full web of film, letting air escape evenly around the full circumference of the package. This produces smoother more uniform shrink at significantly lower shrink tunnel temperatures. The end result is a noticeable improvement in package appearance and a reduction in energy costs.

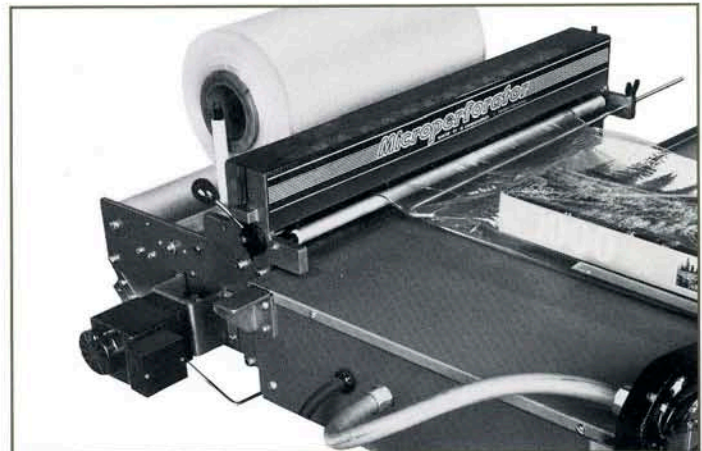

The Weldotron **MICROPERFORATOR™** works with all shrink films and is fully guarded for operator safety. Microperforator models are available for manual, semi automatic and automatic L-sealers as well as form-fill-seal wrappers. (Please refer to our price list or contact Weldotron for specific models.)

MICROPERFORATOR™ FEATURES/BENEFITS:

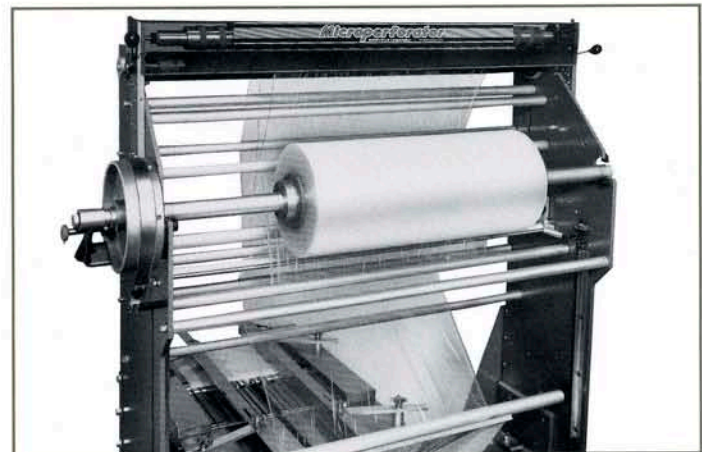

- Improves package appearance
- Reduces package “dog ears”
- Eliminates package “ballooning”
- Saves energy
- Works with all films
- Safe, easy film threading
- Fully guarded
